

Use Case ID	STOCK-PRODUCT-ID
Use Case Name	STOCK PRODUCT
Created BY	GIVEN CHISANGA
Date Created	21/03/25

Description	This use case allows the system to manage product stocking. The system updates inventory when new stock arrives, ensuring that products are properly categorized and recorded. Stocking can occur due to new product arrivals, restocking existing products, or handling returned products.
Primary Actor	Order Processing System
Secondary Actor	Account payable System
Include Use Cases	1. update inventory; Ensures that products are updated with new or when some inventory is removed
Extend Use cases	1. stock returned product; This deals with products that have been returned by customers or suppliers. It ensures they are either restocked, or sent back to suppliers. 2. stock new product; This represents the stocking of entirely new products 3.stock cancelled product; This handles cases where a previously stocked product is canceled—possibly due to order cancellation or quality problems.
Preconditions	1. The product must be listed in the system or added as a new product. 2. The warehouse must have available space for stocking.
Postconditions	1. The product is successfully stocked and marked as available in the system.

	2. The stock levels are updated in the inventory.
--	---

Main flow	1.The Order Processing System initiates the stock update. 2.The system verifies the product details (name, ID, quantity). 3.The system checks if the product exists in the database. 4.If the product is new, the system triggers the Stock New Product use case. 5.If the product is an existing item, the system updates the stock levels. 6.The system logs the stock update transaction. 7.The stock details are displayed for confirmation. 8.The use case ends.
Alternative flow	Scenario1. 1. Invalid Product Details; The system displays an error message. Scenario2. 1. Insufficient Storage Space; The system notifies the warehouse team. 2. The process is paused until space is available. Scenario3. 1. Cancelled products; The system prevents stocking of canceled products.
