

Use Case Id	Fill-order-Id
Use Case Name	Fill-order Use case
Created By	Bwembya Ruth .M
Date Created	20 th March,2025.

Description	The Fill Order use case describes the process of preparing and packaging items from inventory to fulfill a customer's order. It involves verifying inventory, picking items, updating stock levels, and coordinating with shipping for delivery. This use case ensures orders are accurately fulfilled and stakeholders are notified of progress.
Primary Actor	Stock clerk
Secondary Actor	• Order-Processing System • Shippers
Preconditions	1. The order has been approved and marked as "Pending Fulfillment." 2. All items in the order are available in inventory. 3. The Order Processing System is operational.
postconditions	1. The order status is updated to "Fulfilled." 2. Inventory levels are adjusted to reflect picked items. 3. The packaged order is ready for shipment. 4. Notifications are sent to relevant stakeholders (e.g., shipping team, customer).
Main Flow	1. Trigger: The Order Processing System sends a fulfillment request. 2. Step 1: Stock Clerk retrieves order details (items, quantities). 3. Step 2: Inventory System confirms item availability. 4. Step 3: Stock Clerk picks items from inventory shelves.

	5. Step 4: Items are securely packaged for shipment. 6. Step 5: Stock Clerk updates the order status to "Fulfilled" in the Order Processing System. 7. Step 6: Inventory System deducts the picked items from stock levels. 8. Step 7: Shippers are notified to collect the packaged order.
Alternative Flow	• 2a: Insufficient Inventory: 1. If an item is out of stock: ▪ The Inventory System flags the shortage. ▪ Order status is set to "On Hold." ▪ A notification is sent to the customer and procurement team. • 4a: Damaged Items: 1. If an item is damaged during picking: ▪ Stock Clerk marks it as damaged in the Inventory System. ▪ A replacement is sourced if available; otherwise, the order is put on hold. Exceptions System Failure: i. If the Order Processing/Inventory System fails: ▪ The Stock Clerk manually logs fulfillment details. ▪ Data is synced once systems recover. Incorrect Item Picked: ii. If the wrong item is packaged:

	▪ Stock Clerk returns the item and picks the correct one. ▪ The error is logged for quality assurance.
